

Sports Inventory Management System – Project Requirements

Overview

The system is a Sports Products Inventory Management System with three user roles:

1. Admin
2. Supplier
3. Customer

The application should manage sports-related products, inventory, suppliers, and customer orders.

Admin Module

The Admin will have complete control over the system.

Features

- Create supplier accounts.
- View all suppliers and customers.
- Manage product categories.
- Monitor inventory levels.
- View all orders placed by suppliers and customers.
- Access an overall dashboard with system statistics.
- Generate reports for sales, inventory, and orders.

Supplier Module

Suppliers will have a separate dashboard and login.

Features

- View available sports products.
- Place bulk orders for products.
- Select products based on size and quantity requirements.
- Receive products at a discounted supplier price compared to customer pricing.
- View order history.

Restrictions

- Suppliers cannot add, edit, or delete products.
- Suppliers can only view products and place bulk purchase orders.

Customer Module

Customers can register and log in similar to e-commerce platforms such as Amazon and Flipkart.

Features

- Register and log in to the system.
- Browse sports products.
- Search and filter products.
- View product details.
- Add products to cart.
- Place orders.
- View order history.

Delivery Information

After placing an order, customers should see an estimated delivery date.

Example:

- Delivery Expected: 10 June 2026
- Delivery Within: 1 Week

Product Management

Each product should contain:

- Product Name
- Category
- Brand
- Size
- Price
- Supplier Price
- Available Quantity
- Product Images
- Description

Dashboard Analytics

Admin Dashboard

- Total Products
- Total Suppliers
- Total Customers
- Total Orders
- Available Stock
- Low Stock Alerts
- Sales Summary

Supplier Dashboard

- Bulk Orders
- Order History
- Order Status

Customer Dashboard

- Recent Orders
- Order Tracking
- Wishlist (Optional)
